## **Attendance**

### **Tutor**

Woude J.C.S.P. van der (Jaap)

### **Group 16**

Berg S.H.M. van den (Stefan)

Boelens W.W. (Wigger Boelens)

Keet M. (Maarten)

Petrescu T. (Tudor)

Phung D.T. (Dat)

Verschuuren R.T. (Rolf)

## Discussed points

### Presentation

- There was no message that came across
  - Keep in mind for final presentation
  - You need to believe in it
- Van der Woude was already frightened for the presentation when he saw the Machine Design draft
  - Boelens defended that it was just a draft so we could get feedback

### Machine design

- Van der Woude believes we got enough feedback to work with
- What, how and why
  - The What is most important
  - The How should be detailed
  - Why is priorities
- Only describe design you chose in detail
  - We can also make positive choices
- At the end we have to make a detailed description
  - Motor turning for example, how does motor get input
  - Output, how specified?
    - Voltages
    - PWM for motor
    - Resistor for lights

### Use-cases

- Both detailed and story are okay

### Priorities

- Nothing wrong with the list itself
- Absence link with consequences

### Interface

- Interface of plastic ware-software should be defined in software phase and the 'plastic ware' phase

### Final product

- Little bit machine
- Definitely documentation

### Work Plan

- Not approved, so deadlines don't apply yet
- Needs to be delivered on 3/3/2015

### If we deliver 27/2/2015

- Feedback at last on Monday

## Documentation

- Everytime we write something we should also document how to test it. If it's not possible to test, then we should rewrite it or remove it.
  - In high level specification too

## Decisions

- A new Work Plan needs to be delivered on 3/3/2015
  - Deadlines as they are now don't apply yet
    - Deadline Machine Design is to be determined by the new Work Plan and needs to be approved by Van der Woude before applicable
