Meeting 4 feb

Present: everyone (not Rolf, because he was not part of our group at this point)

Stefan volunteers and is unanimously chosen as QAM for the first 3 weeks
Maarten is randomly chosen as Materials manager, there are no objections to this, he will keep this position forever
If he can not be there when we meet/work or gets sick, Tudor takes over the position as Materials manager.

We decide to split the borg money

Stefan proposes to ask in the tutor meeting how to get the key on Friday, which we agree to do.

Nothing decided, just asking how everyone is doing.

Wigger proposes to upload his version of 4.2 on github, which we agree on.
Stefan volunteers to help with this exercise

Work plan will be done by: Maarten, Tudor and Dat

To have done at the end of this week:
nothing

To have done at Thursday end of next week:
the abstract
work plan next week

Agreed to show work on Thursday so changes are possible before we need to hand it in.

Dat reminds to not forget summary's

No questions

Decided to decide who will be president and secretary next week

Decided on the following git workflow:
-create a branch named after the feature you want to add
-develop and commit in that branch
-when you're finished use github to create a pull request between your branch and the dev branch
-wait for someone else to see what you did and accept or deny your pull request
